Education

University of Calgary Calgary, AB

Bachelor of Science in Computer Science

- GPA: 3.7/4.0 Coursework: Operating Systems, Distributed Systems, Database Systems, Compilers

Experience

Snap Remedy Apr. 2026 – Present

Software Developer Intern (Apr. – Jul. 2026) / Software Developer (Jul. 2026 – Present)

- Built a Django/React SKU-ranking application integrating Spire ERP inventory, sales, pricing, and production data with configurable scoring and interactive filtering.
- Implemented resumable synchronization for nine ERP datasets containing 500K+ rows, using checkpoints, bounded retries, and stable-key upserts for failed-page replay.
- Integrated AI-generated SKU explanations through the Groq API, with context-hashed caching and per-SKU error handling that preserves ranking results.
- Developed 185 backend tests covering data mapping, ranking rules, API validation, synchronization recovery, and external-provider failures.
- Built CSV imports with row-level validation and write-free previews, committing confirmed changes in one atomic transaction.

PRO-Formance Intermodal Jan. 2026 – Apr. 2026

Software Intern *Calgary, AB*

- Developed a React, SQL, and Python internal system as sole developer, automating grant applications for 30+ students per month and scheduling 200+ training hours per month.
- Reduced administrative effort by 70% by resolving data-integrity and workflow issues across scheduling, records management, and reporting.
- Built instructor and attendance analytics to identify recurring failure patterns, contributing to a 20% improvement in student pass rates.

Phillys Sep. 2025 – Nov. 2025

Web Developer *Calgary, AB*

- Cut average page load time by 40% with a mobile-friendly PHP and JavaScript rebuild of the legacy website.
- Managed DNS, SSL certificates, and cPanel deployment, and resolved post-launch browser, integration, and hosting issues.

Projects

Distributed Chat System | *Java, Java NIO, TCP, Gradle* Jan. 2025 – Apr. 2025

- Implemented non-blocking TCP messaging with selector-driven I/O, concurrent message workers, newline framing, and output queues that retain partially written buffers.
- Built file-backed message history with UUID tracking, byte-offset and timestamp indexes, and SHA-256 hashes for duplicate detection.

J-- to MIPS Compiler | *Python, ANTLR4, MIPS* Jan. 2026 – Apr. 2026

- Implemented custom language grammars, four-pass semantic analysis for scopes and types, and MIPS code generation for stack frames, function calls, and short-circuit expressions.

Technical Skills

Languages: Python, Java, JavaScript, SQL, C, PHP, HTML/CSS, AArch64 Assembly
Platforms & Tools: Git, Linux, Docker, Gradle, cPanel
Frameworks & Databases: Django, React, Node.js, Express, MySQL, SQLite
Engineering: API integration, relational data modeling, automated testing, TCP/IP, non-blocking I/O
